Figure 1. The effect of the concentration of the *Agrobacterium* suspension on the transformation efficiency of *Agrobacterium* strains.

Figure 1. The effect of the concentration of the *Agrobacterium* suspension on the transformation efficiency of *Agrobacterium* strains.

Age Group	Percentage
18-24	18%
25-34	22%
35-44	15%
45-54	12%
55-64	10%
65-74	8%
75-84	5%
85+	3%

Figure 1. The effect of the number of trials on the number of correct responses. The number of correct responses was plotted against the number of trials for each condition. The error bars represent the standard error of the mean. The number of correct responses increased with the number of trials for all conditions. The number of correct responses was significantly higher for the 10 trials condition than for the 5 trials condition for all conditions.

Abstract

Abstract

Keywords: child sexual abuse; disclosure; social support

Figure 1: Schematic representation of the experimental design. The diagram shows a sequence of events: 'Stimulus presentation' (a box with a question mark), 'Response' (a box with a question mark), 'Feedback' (a box with a question mark), and 'Inter-trial interval' (a box with a question mark). The sequence is repeated for 'Trial 1' and 'Trial 2'.

Figure 1 is a line graph showing the number of cases of HIV infection in the United States from 1984 to 1994. The x-axis represents years from 1984 to 1994. The y-axis represents the number of cases, with a scale break between 100,000 and 1,000,000. The graph shows a sharp increase starting around 1985, reaching approximately 1,000,000 cases by 1994.

Figure 1. A schematic diagram of the experimental setup. The subject is seated in a chair and views a video screen. The screen displays a target (a red dot) and a starting point (a green dot). The subject's hand is positioned at the starting point. The distance between the starting point and the target is 10 cm. The subject is instructed to move the hand from the starting point to the target. The video screen is 100 cm high and 100 cm wide. The starting point is 50 cm from the left edge of the screen. The target is 50 cm from the right edge of the screen. The subject's hand is 50 cm from the left edge of the screen. The distance between the starting point and the target is 10 cm. The subject is instructed to move the hand from the starting point to the target.

[illegible]

Figure 1. Schematic representation of the experimental design. The subjects were divided into two groups: the control group and the experimental group. The control group was divided into two subgroups: the control group and the experimental group. The experimental group was divided into two subgroups: the control group and the experimental group. The control group was divided into two subgroups: the control group and the experimental group. The experimental group was divided into two subgroups: the control group and the experimental group.

Abstract The purpose of this study was to determine whether the use of a computerized program designed to teach the basic concepts of epidemiology would increase knowledge about epidemiologic methods among health care workers. A total of 100 health care workers were randomly selected from a large tertiary care hospital and divided into two groups. The control group received no instruction, while the experimental group received instruction through the computer program. Both groups completed a questionnaire before and after the intervention. The results showed that the experimental group had significantly higher scores than the control group on all items related to epidemiologic methods. These findings suggest that the use of a computerized program can effectively improve knowledge about epidemiologic methods among health care workers.
